

WED Installation Tips

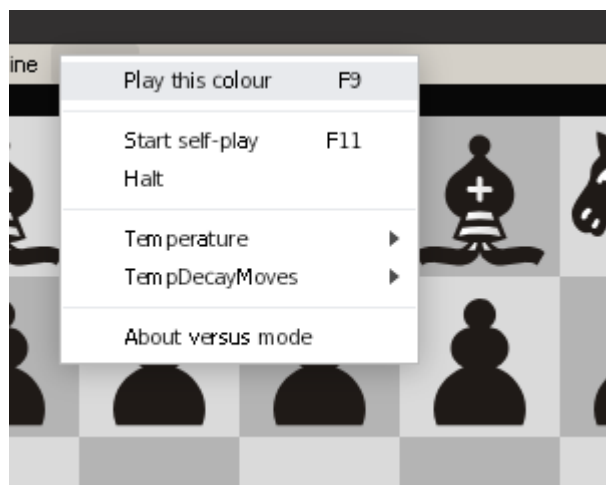

To configure nibbler to use Leela Chess Zero, first select choose engine.

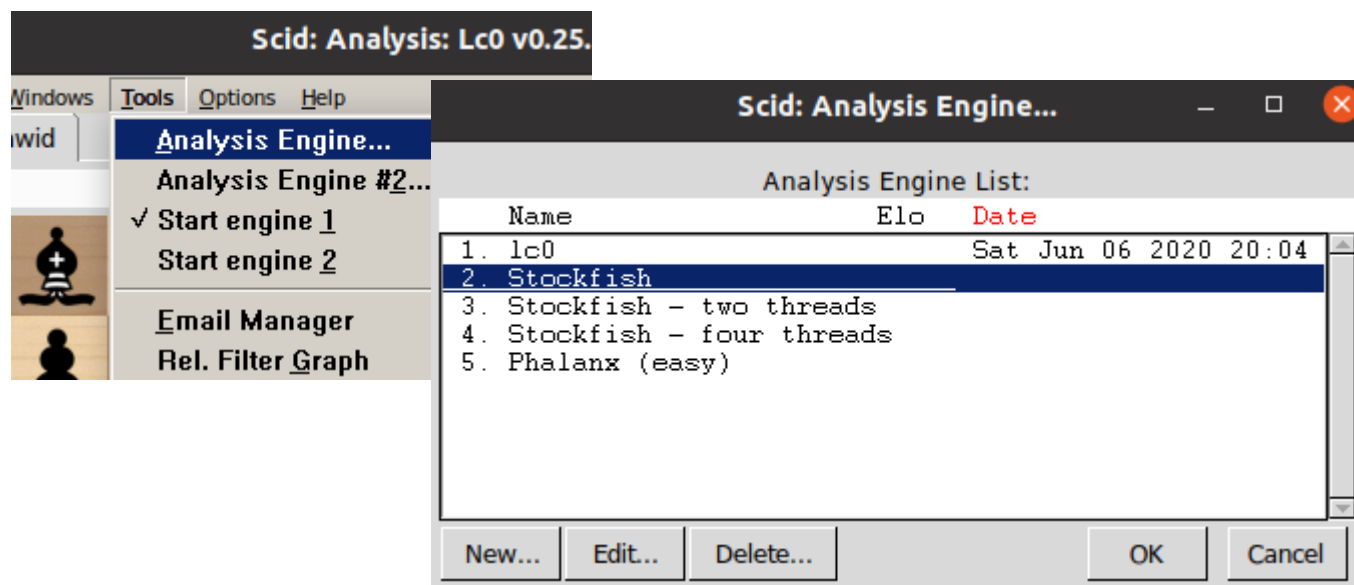

Navigate to the engine file within the wine container as shown...

To play a game against nibbler as white, make an opening move, then select Versus/Play this color. For a weaker computer opponent, set Versus/Temperature to 1 and Versus/TempDecayMoves to Infinite.

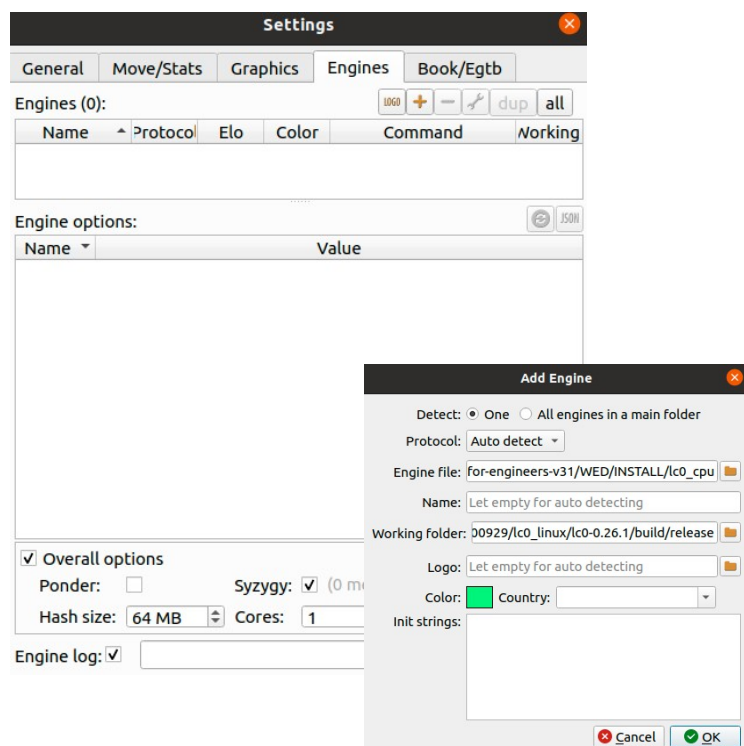

To choose an engines in SCID, set the analysis engine from the Tools menu as shown

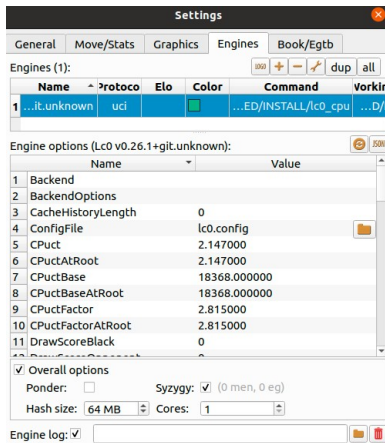

To play against an engine, either choose Play/Serious game or instruct a running analysis engine to make a move every time it's your opponent's turn.

An optional alternative to nibbler is BanksiaGui. To set up BanksiaGui, follow these steps:

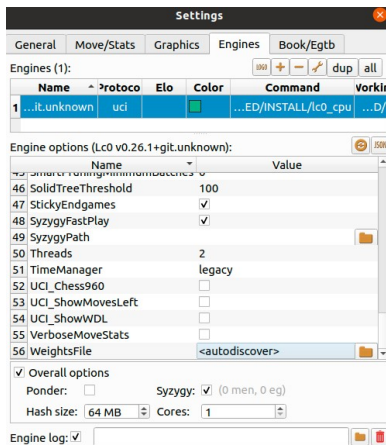

1. From the menu select File/Settings/Engines
2. Click "+" to add a new engine and navigate to the engine file, e.g. lc0_cpu

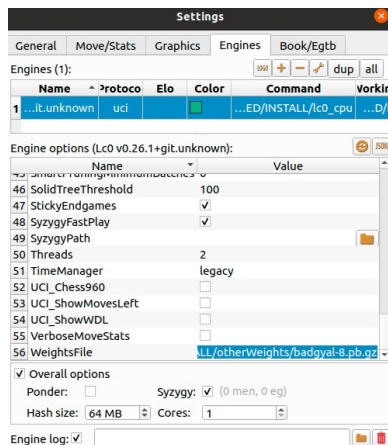

3. Click "OK" and then click on the engine name to see engine options

4. Scroll down to the last option in the list, "WeightsFile".

5. The value for WeightsFile is set to "<autodiscover>", which may automatically find a weights file in the same directory as the engine you specified. In case that doesn't work, double click on "<autodiscover>" and replace it with the full path and file name for your weights file.
